

Head Protection

Workplace (Health, Safety & Welfare) Regulations 1992 require the provision of safety equipment from falling objects where the risk of falling objects or areas of restricted head space cannot be eliminated. Safety should be provided in the form of safety helmets or bump caps when working in restricted spaces where bump hazards are possible.

Standards - All safety helmets are CE marked and meet EN397 standard.

All Bump caps meet EN812 standard to provide the wearer protection against the effects of striking head/scalp against hard or sharp stationary products.

Helmet life - Helmets are designed to have an in-use life of up to 5 years from the date of storage removal. Excess wear and tear and extreme environments can considerably reduce the lifespan. In these cases it is recommended to replace every 6-12 months.
