We Offer
a Better Approach

An approach that incorporates competent technologies, instead of manpower alone, can be a much better choice in many ways. Such an approach is:

Safer

Non-contact measurement to avoid physical contact

Faster

One second per person for skin-surface temperature detection

Smarter

AI detection, greatly reducing false alarms

Advantages
of Thermal Technology

- AI technology ensures thermographic cameras only detect human skin-surface temperature to reduce false alarms of other heat sources.

- Compensation algorithm ensures the temperature is compensated with ambient temperature and the distance of the measured target for better accuracy.

- Thermal technology has been applied widely in temperature screening scenarios as it offers more flexibility and efficiency in preliminary screening of elevated skin-surface temperatures.
