

The Micro Range

Computer media are very easily damaged, manufacturers recommend that they are not exposed to temperatures over 52°C or humidities over 85%. Even a hot mug of coffee represents a real hazard, so imagine what a small fire would do. In a Chubb Media Safe, computer media are protected from fire, dust, pilferage, magnetic fields, unauthorised access, accidental damage and electrostatics.

Tested to the most stringent international standards, VDMA S60DIS 1 hour fire test and European Standards EN1047-1, including:

- Furnace exposure to over 1000°C
- Dropped 9.1m onto rubble to simulate floor collapse
- Reheated and cool out period
- The Chubb Micro Range is neutral so that it will easily match any office environment. Its compact size allows a generous storage of media but ensures the cabinet can be situated under desks
- Two sizes available: Micro 40, Micro 80
- Lightweight construction allows for floor loading limitations
- Single slam action door which provides protection even if not locked
- Finished in light grey texture
- Wide range of fittings to suit any media with flexible shelves to meet increased customer requirements
- Alarm kit available to signal if a door remains open for over a specified time
- VdS approved lock

Chubb Safes Micro Range has been subject to the highest rated 1hr fire test VDMA S60 DIS
