Additional Information

Whilst HFC-152a propellant is classified as flammable, its behaviour differs to standard highly flammable aerosols propelled with butane. HFC-152a has a lower explosive limit (LEL) of 3.9% and does not exhibit a flashback or flame extension in the standard tests used to measure the flammability of aerosols. Butane has an LEL of only 1.8% and exhibits a flame extension of around 55cm making it notably higher in flammability.
