BEAVERSWOOD®

making the workplace work smarter

Highly visible stencil kits designed for electric vehicle charging bays. Help drivers efficiently locate the correct charging bay areas, where they can charge their electric vehicle.

There are thousands of electric vehicle charging points in the UK alone, often located in supermarkets, shopping centres, public car parks, hotels and service stations. These stencils are ideal for any area where electric charging points are located.

Each stencil is 600mm x 600mm overall. However, if you require a different size, we can create bespoke size stencils to your requirements.

Available singularly as a stencil, or with a kit. Each kit is available with 1 stencil, 2 cans of paint and a hand held paint applicator. Choose from 3 different paint colours – red, yellow or white.
