

envisage[®] laser toner cartridges

We supply envisage[®] laser toner cartridges for all the leading brands including Apple, Brother, Canon, Dell, Epson, Hewlett Packard (HP), Lexmark, Xerox and more.

Quality remanufactured cartridges

Every envisage[®] cartridge is fully guaranteed, and using remanufactured cartridges does not invalidate your machine's warranty. envisage[®] cartridges are of equivalent quality to Original Equipment Manufacturer (OEM) cartridges. All of the products in the envisage[®] range are benchmarked to OEM specifications, and all key components are replaced. Every envisage[®] cartridge prints at least the same number of pages as the equivalent OEM product.

How we produce envisage[®] laser toner cartridges

The process of remanufacturing an envisage[®] laser toner cartridge ensures we produce a quality product. Every cartridge that we use is fully disassembled, checked and cleaned. All the 'mission critical' components are replaced before the cartridge is checked by one of our technicians to confirm that every part is fully functional. After a thorough check the cartridge is completely rebuilt, and filled with new toner.

Testing

We test every single cartridge so you get the highest quality, every time. We perform tests for print quality, page yield, reliability, image resolution and image density on all envisage[®] cartridges. Each cartridge has its own individual bar code for full traceability.

The full envisage[®] range is featured in our catalogue.
