

N+ Modem Router

Belkin's N+ Wireless Modem Router is based on the draft 802.11n 2.0 technology which provides a wireless network that has the range to easily cover any-size home or office. The N+ Modem Router has the bandwidth and speed for handling media intensive applications that take up large amounts of your bandwidth.

A USB Storage port on the back of the router enables you to connect USB storage devices such as an external hard drive or thumb drive to the network. Now you can centrally store and share media content and files from the USB hard drive to every computer on the network.

The N+ Wireless Modem Router is the central connection point of your wireless network. You can add up to 16 computers to your Wireless Network with additional desktop and notebook adapters. Position your Belkin Modem Router in between your Broadband ADSL line and your computer to start sharing your broadband Internet access.

For better wireless performance, use the Belkin N+ Wireless Modem Router with an N+ Wireless USB Adapter (F5D8055) connecting your client computers. (Sold separately)

Benefits
