## 5 Fire-fighting measures

- Explosive Limits: Test data show that lower explosive limits are approximately 0.1kg/m<sup>3</sup>; upper limits are not well defined but could be up to 2kg/m<sup>3</sup>. Minimum ignition energies to ignite toner clouds and layers are of the order of 52.5 and 110.0mJ respectively. Ignition temperatures to ignite toner dust clouds and layers are approximately 496 and 388°C respectively
  - Flash point - not applicable
  - Products of combustion include oxides of carbon and toxic organic fumes
  - In case of fire use water, foam, carbon dioxide or dry agent
- 

## 6 Accidental release measures

### Immediate Actions

- Toner, as with any fine dust, if suspended in air in the right proportion, can present an explosion hazard. Therefore, if a cloud is formed by accident, all sources of ignition should be removed until the spill is dealt with.

### Clean Up Actions

- Use a vacuum cleaner to remove excess, then wash with COLD water. Hot water fuses the toner making it difficult to remove
-
